

WEEK 4 READING INSIDE THE SYSTEM

From March 10th to March 16th, 2025

Contents to be developed:

- Review of Wh-questions
- Relative Pronouns (Who, whom, whose, that)
- Technical specifications
- What is inside a PC system

Review of Wh-questions

Wh-questions a question in English that is a request for information. Wh- questions usually start with a word beginning with wh-, but "how" is also included. The wh- words are: what, when, where, who, whom, which, whose, why, and how.

How to form Wh- questions using patterns

There are two basic patterns you can use to form Wh- questions in English.

With no auxiliary

Wh- word + be + subject

Examples:

- **Who is that?**
- **How are you?**

With auxiliary

Wh- word + auxiliary + subject + verb

Examples:

- **What do you want?**
- **Why did you quit?**

What's an auxiliary verb?

In questions, an auxiliary verb uses words like “do,” “does,” or “did.” It can also be a modal like “can” or “should.” For different tenses, it can be “will” (future), “have” (present perfect), etc.

Who

Use “who” to talk about a person

Examples

Question

Answer

Who is that?

It's our new teacher.

What

Use “what” to ask about a thing.

Question

Answer

What time does the software update start? → The update starts at 10:00 PM.

Which software is best for graphic design? → Adobe Photoshop and Canva are great options.

Where

Use “where” to ask about a place.

Question

Answer

Where can I download the latest version of the software? → You can download it from the official website or the app store.

When

Use “when” to ask about time. When asking about clock time

Question

Answer

When will the software update be available? → It will be available next Monday at 10:00 AM.

Why

Use “why” to ask about a reason.

Question

Answer

Why is the software not working properly? → It might be due to a compatibility issue or a missing update.

Whose

Use “whose” to ask about possession.

Question

Answer

Whose responsibility is it to test the new software? → The quality assurance (QA) team is responsible for testing.

How

Use “how” to ask about a method/way.

Question

Answer

How do I install this software on my computer? → You need to download the installer and follow the setup instructions.

WH QUESTIONS

Las WH QUESTIONS sirven para preguntar información específica.

WHEN? **Cuándo**
When is your class? / ¿Cuándo es tu clase?

WHAT? **Qué / Cuál**
What is this? / ¿Qué es esto?

WHO? **Quién**
Who are you? / ¿Quién eres?

WHERE? **Dónde**
Where is Danna? / ¿Dónde está Danna?

WHY? **Por qué**
Why are you sad? / ¿Por qué estás triste?

HOW? **Cómo**
How are you? / ¿Cómo estás?

What ? - ¿Qué? ¿Cuál? ¿Cuáles?
What else? - ¿Qué más?
Which ? - ¿Qué? ¿Cuál? ¿Cuáles?
How ? - ¿Cómo? ¿Cuán?
How else ? - ¿De qué otra manera?
When ? - ¿Cuándo?
Where ? - ¿Dónde? ¿Adónde?
Where else ? - ¿Dónde más?
Why ? - ¿Por qué? ¿Para qué?
Who ? - ¿Quién? ¿Quiénes?
Who else? - ¿Quién más?
Whom ? - ¿A quién? ¿A quiénes?
Whose ? - ¿De quién? ¿De quiénes?
How much ? - ¿Cuánto/a?

Wh- Question

Who
Person

- ☐ Who is your best friend?
- ☐ Who is at the party?

Where
Place

- ☐ Where do you live?
- ☐ Where did you go?

When
Time, Occasion

- ☐ When is your birthday?
- ☐ When are you going to Japan?

Why
Reason

- ☐ Why are you sad?
- ☐ Why are you angry?

What
Thing, Object

- ☐ What are you going to wear?
- ☐ What time is it?

Which
Choice, Option

- ☐ Which dress fits me better?
- ☐ Which among these fruits do you like the most?

Relative Pronouns

A relative pronoun is a pronoun that's used to introduce a relative clause. The main English relative pronouns are which, that, who, and whom. These words can also function as other parts of speech—they aren't exclusively used as relative pronouns.

A relative clause introduces further information about the preceding noun or noun phrase, either helping to identify what it refers to (in a restrictive clause) or just providing extra details (in a nonrestrictive clause).

The relative clause comes after a noun or noun phrase (called the antecedent) and gives some additional information about the thing or person in question. The relative pronoun represents the antecedent.

Pronoun	Usage	Example
Which	- Refers to things - Used in nonrestrictive clauses	My bike, which I've owned for three years, is in need of some maintenance.
That	- Refers to things - Used in restrictive clauses	The last bike that I owned wasn't very resilient.
Who	- Refers to people - Used as a subject pronoun	The man who lives next door to me is called Jamil.
Whom	- Refers to people - Used as an object pronoun	I don't know the names of my other neighbors , whom I've never met.

Relative Pronouns		
Relative Pronouns take the place of nouns or pronouns. They are called relative pronouns because they always relate back to something or someone else. They are used to join two sentences about the same person or thing.		
Pronouns	Usage	Examples
who	replace the subject pronouns I, she, he, we and they	This is the man who broke the window.
whose	show possession or relationship.	She knew the family whose house we bought.
whom	replace the object pronouns me, her, him, us and them	They have found the lady whom they want to interview.
which	Clauses that begin with which are almost always non-restrictive	My precious blue lamp, which was in the room, was broken.
that	Clauses that begin with that are almost always restrictive clauses	The lamp that was in the room was broken.

Practice 1: Relative Pronouns vs. Wh-Questions in Software

Instructions: Fill in the blanks with the correct **relative pronoun** (**who, which, that, whose**) or **Wh-question** (**what, where, when, why, which, whose, how**), depending on the sentence context.

Part 1: Fill in the Blanks with the Correct Relative Pronoun

1. The software engineer _____ developed this application works for a major tech company.
2. The program _____ you installed yesterday is not compatible with this operating system.
3. The update _____ improves system performance will be released next week.
4. The company _____ software we use just launched a new version.
5. The bug _____ caused the system crash has been fixed.

Part 2: Fill in the Blanks with the Correct Wh-Question

6. _____ is the best antivirus software for Windows?
7. _____ do I need to restart my computer after an update?
8. _____ can I find the settings to change my software preferences?
9. _____ does the software require an internet connection?
10. _____ software version are you currently using?

Technical specifications

Computer hardware specifications are technical descriptions of the computer's components and capabilities.

- Processor speed, model and manufacturer. Processor speed is typically indicated in gigahertz (GHz). The higher the number, the faster the computer.
- Random Access Memory (RAM), This is typically indicated in gigabytes (GB). The more RAM in a computer the more it can do simultaneously.

- Hard disk (sometimes called ROM) space. This is typically indicated in gigabytes (GB) and refers generally to the amount of information (like documents, music and other data) your computer can hold.
- Other specifications might include network (ethernet or wi-fi) adapters or audio and video capabilities.

Processor	4 th generation Intel® Core™ i7 quad-core [3.4GHz,8MB Shared Cache]
Operating system	Windows 8.1 64 bit
Memory	16GB DDR3 - 1600MHz
Hard drive	2TB 7200 RPM SATA
Graphics	2GB AMD Radeon R7 240 [DVI, HDMI, & DVI to VGA]
Screen	23" LED Display

PC hardware specifications are a summary of a computer’s internal components, including its processor, memory (RAM), Windows version, and other system information. Examples of PC specs include hard drive capacity and processor speed. PC specs can show you how well your computer can perform certain processes.

A computer may run slowly — or even crash — if just one of the specs is too low for a particular application. Some video editing programs are incredibly resource-heavy, meaning they have to modify high-quality video files. The standard consumer-level PC will struggle to run these programs as intended.

A computer’s components not only need to handle what you throw at them, but they must be configured to take advantage of their strengths. Every component uses “drivers,” which tell the computer how to operate that component. Manufacturers are constantly optimizing drivers, and your computer will run better if you update your drivers regularly.

What is inside a PC system

What is a system unit? A computer system unit is the case that houses the internal parts of a computer, the kind used for work and entertainment. This case is also sometimes called the

computer tower and it comes in a variety of materials and colors, although is most often black. When people use a computer, multiple parts are used, including the monitor, keyboard, mouse, and the box of components that work to process digital information. The computer system unit refers to the case, box, or tower that includes many components that work together in order to communicate with other computers, produce sound and audio, and allow human interaction. The computer system unit does not include the monitor, mouse, keyboard, or screen.

Practice 2: Reading Comprehension – Fill in the Blanks

Instructions: Read the paragraph carefully and complete the sentences with the correct word or phrase according to the previous reading.

1. The _____ is the case that houses the internal parts of a computer.
2. Another name for the system unit is the computer _____.
3. The system unit comes in different materials and colors, but it is most often _____.
4. The system unit contains multiple components that work together to process _____ information.
5. The system unit does not include external devices like the _____, _____, _____, or screen.

Practice 3: Vocabulary Matching

Instructions: Match the computer-related words with their correct definitions.

Word	Definition
1. System unit	A. Data that is processed and stored in electronic form
2. Monitor	B. A small device used to move a pointer and select objects on a screen.
3. Keyboard	C. An input device used to type letters and numbers.
4. Mouse	D. The physical case that houses a computer's internal components..
5. Digital information	E. A device that displays visual output from the computer.

Practice 4: Reading: Understanding Technical Specifications

When buying or evaluating a computer, it is important to understand its **technical specifications**. These specifications describe the hardware and software components that determine the computer's **performance** and **capabilities**.

One of the most important specifications is the **processor (CPU - Central Processing Unit)**. The CPU affects the speed and efficiency of the computer. A higher number of **cores** and **clock speed** (measured in GHz) means better performance.

Another key component is **RAM (Random Access Memory)**. RAM temporarily stores data that the computer needs to access quickly. More RAM allows for **better multitasking** and faster performance.

The **storage** of a computer is also important. Computers usually have either a **Hard Disk Drive (HDD)** or a **Solid-State Drive (SSD)**. SSDs are faster and more reliable than HDDs, but HDDs offer more storage at a lower cost.

The **graphics card (GPU - Graphics Processing Unit)** is essential for gaming, video editing, and 3D rendering. There are two types: **integrated GPUs**, which are built into the processor, and **dedicated GPUs**, which provide higher performance for demanding tasks.

Other important specifications include the **operating system (OS)**, the number and type of **ports** (USB, HDMI, etc.), and the **battery life** (for laptops).

Understanding these specifications helps users choose the right computer based on their needs, whether for work, gaming, or everyday use.

Activity: Match the Specifications to Their Functions

Instructions: Match each **technical specification** with its **correct function**.

Technical Specification	Function
1. Processor (CPU)	A. Stores files and applications permanently.
2. RAM	B. Provides power to a laptop when not plugged in.
3. Storage (HDD/SSD)	C. Handles complex visual processing, like gaming.
4. Graphics Card (GPU)	D. Determines how fast the computer processes data.
5. Battery Life	E. Stores temporary data for quick access.

You have reached the end of the reading for
week 4.

Remember, take notes of the doubts that have
arisen through the reading and the activities
developed. Also, don't forget to have at hand,
the resolution of the activities in the
synchronous class.
