

WEEK 6 READING INSIDE THE SYSTEM

From March 24th to March 30th, 2025

Contents to be developed:

- Review of Relative Pronouns
- Comparative degree of
- similarities and superiority of adjectives
- Your ideal computer system
- Buying a computer (computer shop)
- Language functions in a computer shop

Review of Relative Pronouns

Relative pronouns are words that introduce relative clauses, which provide additional information about a noun or pronoun in the main clause. They connect the relative clause to the main clause and often refer back to a noun or pronoun mentioned earlier in the sentence. Here's some information about their usage with examples related to software engineering:

Common Relative Pronouns:

1. **Who:** Refers to people.
2. **Whom:** Also refers to people, but used as the object of a verb or preposition.
3. **Which:** Refers to things or systems.
4. **That:** Can refer to both people and things. It's commonly used in restrictive relative clauses (essential information) and is sometimes omitted in informal language.
5. **Whose:** Indicates possession and can refer to both people and things.

Usage:

- Relative pronouns introduce relative clauses, providing additional information about a noun or pronoun in the main clause.
- They can serve as the subject, object, or possessive of the verb in the relative clause.

Examples:

1. **The developer who wrote the code is an expert in Python.**
 - In this sentence, "who" introduces the relative clause "who wrote the code," providing additional information about the noun "developer."
2. **The software that we deployed last week has improved system performance.**
 - Here, "that" introduces the relative clause "that we deployed last week," which gives more information about the noun "software."
3. **She is the engineer whose algorithm optimized the data processing speed.**

- In this example, "whose" introduces the relative clause "whose algorithm optimized the data processing speed," providing information about the possession related to "engineer."
- 4. **The application, which is compatible with Android and iOS, has gained popularity quickly.**
 - "Which" introduces the relative clause "which is compatible with Android and iOS," offering additional detail about the noun "application."
- 5. **The project manager whom the team consulted was very knowledgeable about cybersecurity protocols.**
 - In this sentence, "whom" serves as the object of the verb "consulted" in the relative clause "whom the team consulted," providing more information about the noun "project manager."

Relative pronouns are essential for adding descriptive and explanatory information to sentences, making them clearer and more detailed, especially in technical fields like software engineering.

Who	Relates to people (Subject)	The musician who wrote this song is French.
Whom	Relates to people (Object)	I know the boy whom sits next to you.
Which	Relates to animals and objects	This is the cake which Mary made.
Why	Refers to reason	Do you know the reason why the market is closed today?
When	Refers to time	The day when the concert takes place is Saturday.
Where	Refers to places	This is the house where my son was born.
Whose	Refers to possession	The boy whose phone just rang should stand up.
That	Relates to people, animals and things	12th September is the date that I was born.

Comparatives and Superlatives

Comparison of adjectives is an essential part of the English language, particularly useful in technical fields like software engineering. It helps describe differences between tools, technologies, performance metrics, and more. We use comparatives and superlatives to express relative degrees of qualities, such as speed, efficiency, and usability.

What is a Comparative?

Comparative adjectives describe a noun by comparing it to another noun. They help highlight differences between two entities. While we often think of '-er' words like *faster* or *smaller*, comparatives can also involve "more" with longer adjectives.

Structure:

- For short adjectives, add **-er** (e.g., *faster*, *cleaner*).
- For longer adjectives (two syllables or more), use **"more"** before the adjective (e.g., *more efficient*, *more reliable*).

Examples in Software Engineering:

1. **Python is faster than JavaScript** for data analysis tasks. (*Comparing the speed of Python and JavaScript*)
2. **This algorithm is more efficient than the previous one.** (*Comparing algorithm efficiencies*)
3. **Git is simpler than SVN** when it comes to version control workflows. (*Comparing simplicity between Git and SVN*)

What is a Superlative?

Superlative adjectives describe a noun by comparing it to two or more nouns, identifying the highest or lowest degree of a quality.

Structure:

- For short adjectives, add **-est** (e.g., *fastest*, *smallest*).
- For longer adjectives, use "**most**" before the adjective (e.g., *most scalable*, *most secure*).

Examples in Software Engineering:

1. **Docker is the most popular containerization tool** among developers. (*Comparing Docker to all other container tools*)
2. **This is the fastest database engine** for real-time applications. (*Comparing performance across multiple databases*)
3. **She is the most experienced developer** on the team. (*Comparing experience levels within a team*)

Irregular Comparatives and Superlatives:

Some adjectives have unique forms:

- **Good → better → best**

Example: VS Code is better than Notepad for coding. / VS Code is the best editor for web development.

- **Bad → worse → worst**

Example: This code is worse than the previous version. / That was the worst bug we've encountered.

Additional Tips:

- Always use "than" after comparatives (e.g., *faster than*, *more reliable than*).
- Use "the" before superlatives (e.g., *the fastest*, *the most effective*).
- In technical writing, comparatives and superlatives can enhance clarity when comparing software, hardware, frameworks, or methodologies.

Understanding comparatives and superlatives helps communicate technical evaluations clearly, making discussions about performance, features, and usability more precise.

Comparatives and Superlatives in Software Engineering

- Python is faster than Java for scripting tasks.
- C is the fastest programming language for system-level development.
- This database is bigger than the previous one in terms of storage capacity.
- AWS offers the heaviest cloud infrastructure in the industry.
- The new algorithm is more efficient than the old one.

Adjective	Comparative	Superlative	Examples
ONE syllable			
Fast	faster	the fastest	The new algorithm is faster than the old one. This framework is the fastest for data processing.
Young	younger	the youngest	Python is younger than Java. Rust is one of the youngest programming languages gaining popularity.
ONE syllable (Ending in -E)			
Nice	nicer	the nicest	The new UI design is nicer than the previous version. This is the nicest dashboard I've seen in this project.
Strange	stranger	the strangest	This bug is stranger than the last one we encountered. It's the strangest error message I've ever debugged.
ONE syllable (Consonant + Short Vowel + Consonant)			
Big	bigger	the biggest	The new database can handle bigger data sets. AWS offers the biggest cloud storage solutions.
Hot	hotter	the hottest	AI is a hotter topic in tech than it was last year. Machine learning is the hottest trend in software development.
TWO syllables (Ending in -Y)			
Happy	happier	the happiest	Developers are happier using tools that automate repetitive tasks. This Agile team is the happiest because of its efficient workflow.
Crazy	crazier	the craziest	Debugging legacy code can be crazier than writing new code. This is the craziest deployment issue we've faced so far.

TWO or MORE syllables			
Famous	more famous	the most famous	JavaScript is more famous than many other scripting languages. GitHub is the most famous platform for hosting code repositories.
Beautiful	more beautiful	the most beautiful	The new website layout is more beautiful than the old design. This is the most beautiful code I've ever reviewed—it's so clean!
Common Exceptions			
Good	better	the best	VS Code is better than many traditional text editors. Linux is considered the best OS for developers.
Bad	worse	the worst	The performance of the old server is worse than the upgraded one. That's the worst piece of spaghetti code I've ever seen!

Practice 1: Fill-in

Directions: Fill in the missing **comparative** and **superlative** forms of the adjectives. Then, complete the example sentences using the correct form of the adjective.

Adjective	Comparative	Superlative	Example Sentence
Fast	_____	_____	The new algorithm is _____ than the old one.
Young	_____	_____	Python is _____ than Java.
Big	_____	_____	AWS offers the _____ cloud storage solutions.
Crazy	_____	_____	Debugging legacy code can be _____ than writing new code.
Famous	_____	_____	GitHub is the _____ platform for hosting code repositories.
Good	_____	_____	VS Code is _____ than many traditional text editors.
Bad	_____	_____	That's the _____ piece of spaghetti code I've ever seen!
Beautiful	_____	_____	The new website layout is _____ than the old design.

Adjective	Comparative	Superlative	Example Sentence
Hot	_____	_____	AI is a _____ topic in tech than it was last year.

Practice 2:

Directions: Go to the following link to practice about the comparative and superlative.

Link: <https://wordwall.net/es/resource/13182246/comparative-and-superlative-adjectives>

Practice 3:

Directions: Translate the following paragraph

Paragraph: The Evolution of Computer Systems

Over the years, **computer systems** have become significantly more advanced. The **latest processors** are **faster** than the ones used a decade ago, allowing for **quicker data processing** and **better performance**. Modern laptops are often **lighter** and **thinner** than older models, making them easier to carry. **Solid-State Drives (SSDs)** are much **faster** and **more reliable** than traditional **Hard Disk Drives (HDDs)**, improving system speed and durability. Additionally, today's **smartphones** are even **more powerful** than some older desktop computers. Among all devices, **supercomputers** are considered **the most powerful** because they can perform **the fastest calculations** in the world. As technology advances, **software** becomes **smarter**, and **hardware** becomes **the most efficient** it has ever been.

Practice 4: Fill-in

Directions: Fill in the Blanks with the Correct Comparative or Superlative Form

1. Modern processors are _____ (fast) than the ones from 2010.
2. SSDs are _____ (reliable) than HDDs.
3. This laptop is _____ (light) than the older version.
4. Supercomputers are _____ (powerful) devices in the world.
5. Today's smartphones are _____ (advanced) than computers from the past.
6. This new coding software is _____ (good) than the one we used last year.
7. The latest AI model is _____ (smart) than its previous version.
8. Cloud storage is becoming _____ (popular) than traditional storage systems.
