

WEEK 7 READING **INSIDE THE SYSTEM**

From March 31th to April 06th, 2025

Contents to be developed:

- **Simple Present**
- **Affirmative, negative and interrogative form**
- **Choosing the right computer**
- **Recommending the correct computer**

Simple Present

The **Simple Present** tense is used to express general truths, habitual actions, scientific facts, and scheduled events. In engineering, it helps describe processes, functions, and system behaviors.

Uses of the Simple Present in Engineering

1.1 General Truths and Scientific Facts

- We use the simple present to describe general truths and established facts.

Examples:

- Electricity flows through conductors.
- A computer processes data at high speed.
- Software updates improve system performance.

1.2 Describing Functions and Processes

- Engineers use the simple present to explain how systems and devices work.

Examples:

- The CPU executes instructions from programs.
- A firewall protects the network from cyber threats.
- The operating system manages hardware resources.

1.3 Habitual Actions and Routine Tasks

- Engineers and technicians perform routine tasks daily.

Examples:

- A software engineer writes code every day.

- The IT team checks the server performance regularly.
- A computer scientist develops algorithms for data analysis.

1.4 Instructions and Technical Descriptions

- Manuals and instructions often use the simple present tense.

Examples:

- Press the power button to start the computer.
- The application runs when you click on the icon.
- The antivirus scans the system automatically.

Structure of the Simple Present

The simple present has three main structures: ***affirmative, negative, and questions.***

2.1 Affirmative Sentences

- **Structure:** Subject + base verb (+ s/es for third-person singular) + object.
- **Use:** Describes facts, habitual actions, and general truths.

Examples in Engineering:

- A computer processes data at high speed.
- Software engineers write code for different applications.
- The operating system controls hardware components.
- An SSD loads files faster than an HDD.

Rules for Adding -s/-es in Third-Person Singular (He/She/It)

Base Verb	Third-Person Singular Form
<i>process</i>	<i>processes</i>
<i>develop</i>	<i>develops</i>
<i>analyze</i>	<i>analyzes</i>

study	studies
-------	---------

2.2 Negative Sentences

- **Structure:** Subject + do/does not + base verb + object.
- **Use:** Expresses that something does not happen.

Examples in Engineering:

- A CPU does not store data permanently.
- Software engineers do not work with outdated tools.
- This program does not support multiple users.
- A traditional hard drive does not operate as fast as an SSD.

Short Forms

- **Do not = Don't** (Used with I, you, we, they)
- **Does not = Doesn't** (Used with he, she, it)

2.3 Questions in the Simple Present

- **Structure:** Do/Does + subject + base verb + object?
- **Use:** Used to ask about regular actions, facts, or processes.

Examples in Engineering:

- Do engineers use Python for automation?
- Does a server store user data securely?
- Do mechanical systems require regular maintenance?
- Does artificial intelligence improve efficiency?

Short Answers

- Yes, they do. / No, they don't.
- Yes, it does. / No, it doesn't.

PRESENT SIMPLE TENSE

+ Affirmative

SUBJECT
I / you / we / they
he / she / it

VERB
speak
speaks

+ Affirmative: I **speak** English.
+ Affirmative: He **speaks** Spanish.
+ Affirmative: They **live** in London.
+ Affirmative: She **lives** in Paris.

Third person verbs need the final "s" in affirmative sentences.

- Negative

SUBJECT
I / you / we / they
he / she / it

AUXILIARY
don't
doesn't

VERB
speak
need
like

⊗ The base form of the infinitive
= ~~to~~ go, ~~to~~ need, ~~to~~ speak, ~~to~~ live
Third person verbs lose the final
"s" in negative sentences.

+ Affirmative: I speak Spanish. + Affirmative: She speaks Italian.
- Negative: I **don't** speak Spanish. - Negative: She **doesn't** speak Italian.

? Question

AUXILIARY
Do
Does

SUBJECT
I / you / we / they
he / she / it

VERB
speak
need
like

⊗ The base form of the infinitive
= ~~to~~ go, ~~to~~ need, ~~to~~ speak, ~~to~~ live
Third person verbs lose the final
"s" in questions.

+ Affirmative: You speak English. + Affirmative: He speaks German.
? Question: **Do** you speak English? ? Question: **Does** he speak German?

Simple Present Tense Verbs for He/She/It and Singular Nouns

Spelling Rules	Examples
With most verbs, add s	live - lives sit - sits stay - stays
Ending in consonant + y change y to i and add es	try - tries carry - carries
Ending in s, z, ch, or x add es	miss - misses buzz - buzzes catch - catches fix - fixes
Exceptions	go - goes do - does

Choosing and Recommending the Right Computer

Selecting the right computer for engineering tasks requires careful consideration of multiple hardware and software factors to ensure efficiency, speed, and reliability. The **processor (CPU)** is the heart of the computer, responsible for executing commands and handling complex calculations; for engineering applications, a high-performance multi-core processor, such as an **Intel Core i7/i9** or **AMD Ryzen 7/9**, is highly recommended. **Random Access Memory (RAM)** plays a crucial role in multitasking and running resource-intensive programs; engineers working with simulations, CAD software, or machine learning should opt for at least **16GB or 32GB of RAM** to prevent lag. Storage type significantly impacts performance—**Solid-State Drives (SSD)** are preferred over traditional **Hard Disk Drives (HDD)** due to their faster data retrieval speeds, reducing application load times and enhancing overall system responsiveness. A **dedicated Graphics Processing Unit (GPU)** is necessary for engineers working with **3D modeling, rendering, or deep learning**, making high-end GPUs such as **NVIDIA RTX series or AMD Radeon Pro** ideal choices. Additionally, display quality and screen resolution are crucial for professionals dealing with precise graphical work, with **4K or high-refresh-rate monitors** being excellent options. Battery life and portability should also be considered for engineers who frequently work on the go, making **lightweight yet powerful ultrabooks** a viable option. Lastly, operating system compatibility with engineering software is vital—**Windows and Linux** are commonly preferred for their versatility and software support, whereas macOS may be suitable for UI/UX development and design work. By carefully evaluating these components, engineers can select a computer that optimally meets their needs, enhancing productivity and workflow efficiency.

When selecting a computer for engineering purposes, consider the following specifications:

Component	Function	Example
Processor (CPU)	Executes instructions	<i>An Intel i7 processor runs applications efficiently.</i>
RAM	Stores temporary data	<i>A laptop with 16GB RAM performs better than one with 8GB.</i>

Storage (SSD/HDD)	Stores files and programs	<i>An SSD loads programs faster than an HDD.</i>
Graphics Card (GPU)	Enhances visual processing	<i>A powerful GPU supports 3D modeling and simulations.</i>

Example Sentences Using the Simple Present

- A powerful processor improves the speed of computations.
- More RAM allows a computer to run multiple applications smoothly.
- An SSD provides faster data access than an HDD.

Practice 1: Correct Verb Form

Directions: Fill in the blanks using the correct simple present form of the verb in parentheses.

1. A software engineer _____ (develop) applications for different platforms.
2. The operating system _____ (control) the interaction between hardware and software.
3. A computer _____ (use) binary code to process information.
4. The power button _____ (turn) the computer on and off.
5. A firewall _____ (protect) the system from cyber threats.

Practice 2: Correct the Errors

Find and correct the errors in the following sentences.

1. The engineers tests the new software every week.
2. A graphics card improve the performance of a gaming laptop.
3. Computer scientists analyze datas to improve artificial intelligence.
4. An SSD is load applications faster than a traditional hard drive.
5. The IT department maintain the security of the network.

Practice 3: Right Computer

Directions: Read the following paragraph and translate in case is necessary.

Choosing the right computer depends on your needs and budget. A student usually needs a lightweight laptop with good battery life, while a gamer prefers a powerful processor and a high-quality graphics card. Professionals working with video editing or design require a computer with a fast processor and enough RAM. Some people choose desktops because they offer better performance at a lower cost. Before buying a computer, it is important to check its specifications and compare different models. A good recommendation is to look for a device that meets your needs without exceeding your budget.

Practice 4: Vocabulary Activity (Matching)

Directions: Match the words with their meanings:

- 1. Processor**
 - 2. Storage**
 - 3. Graphics card**
 - 4. RAM**
 - 5. Specifications**
-
- a** The part of the computer that handles images and videos.
 - b** A list of details about a device's features and performance.
 - c** The component that performs calculations and tasks.
 - d** The space where files and data are saved.
 - e** Temporary memory that helps run programs smoothly.

Practice 5:

Directions: complete the sentences with the correct vocabulary word

1. A computer with a fast _____ can handle multiple tasks efficiently.
2. If you need to store many files, you should check the _____ capacity.
3. Gamers prefer a computer with a powerful _____ for better visuals.
4. A good laptop needs enough _____ to run programs smoothly.

5. Before buying a computer, always check the _____ to see if it meets your needs.

Practice 6:

Directions: Look for the meaning of the following verbs and have them ready for the class.

**SCROLL DOWN – PLUG IN – LOG IN – TURN ON – TURN OFF
TURN UP – TURN DOWN – SHUT DOWN – CLICK ON**
