We use **might** and **may** to talk about **possibility** in the present or future.

**ALL ABOUT MULTI-
FUNCTION PRINTERS:
WHY THEY MIGHT BE
THE RIGHT CHOICE
FOR YOU**

Multi-function printers, or **MFPs**, are machines that **combine different functions** into one single device. Instead of buying separate machines for printing, scanning, copying, and faxing, people can use an MFP to do all of these tasks. These machines are very popular in offices, schools, and even in some homes.

One big advantage is that multi-function printers **might save** space and money. For example, if you work in a small office, you **may not have** enough room for four separate machines. An MFP can solve that problem. Also, buying one device is usually cheaper than buying four different ones.

Modern MFPs are becoming smarter and more advanced. Many models **may include** wireless printing, which means you can print from your phone or laptop without using a cable. Some machines **may also allow** users to save documents directly to cloud storage platforms like Google Drive or Dropbox. However, to use all of these features, you **might need** to install special software or connect the printer to Wi-Fi.

Even though MFPs are very useful, they **may not be** perfect for every situation. If your company needs to print thousands of pages every day, a single MFP **might not handle** the workload well. In that case, a high-volume printer would be a better choice.

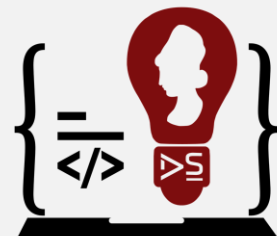

Before buying an MFP, you **may want** to consider what you really need. Think about the number of pages you print each week, whether you need color or just black-and-white, and if you need to scan or fax documents often. High-end models **might offer** faster printing and better quality, but they also **may cost** more.

TRUE OR FALSE STATEMENTS

Instructions: Read each statement and write **True** or **False** based on the reading.
