

from APRIL 21st to APRIL 27th

WEEK 9

UNIVERSIDAD DE EL SALVADOR

Facultad Multidisciplinaria De Occidente

Departamento de Ingeniería y Arquitectura

Ingeniería En Desarrollo De

Software/Educación En Línea

SEMESTRE I - 2025

UNIT 3	modal can, preposition + gerund, used to
WEEK 9	TOPICS: describing functions and features

LEARNING OBJECTIVES:

At the end of the class, SWBAT:

- 1. Use "can" to describe software capabilities.***
- 2. Use prepositions + gerunds to describe functions.***
- 3. Use "used to + verb" to describe past software habits or deprecated features.***
- 4. Read and understand descriptions of software/app features.***
- 5. Use appropriate vocabulary to describe functions and features.***

UNIT 3

INPUT and OUTPUT DEVICES

WEEK 9

WEEK 9

GRAMMAR FOCUS:

***modal can, preposition + gerund,
used to***

TOPICS AND VOCABULARY:

describing functions and features

Modal Verb

STRUCTURE:

subject + can + base verb

example:

This program can edit videos.

We use "**can**" to talk about:

- **ABILITY**: what software is able to do
- **POSSIBILITY**: what is possible with the software

Can

Examples:

- Google Docs **can save** your files automatically.
- This app **can translate** text in real time.
- You **can access** your account from any device.
- Photoshop **can remove** backgrounds from images.
- This IDE **can autocomplete** your code
- Users **can export** data in different formats
- This database tool **can handle** millions of records.
- It **can run** on Windows, macOS, and Linux.
- You **can share** your project with teammates in real time.

EXERCISE 1:

WRITE THE SENTENCES

DIRECTIONS:

Look at the following chart
and create sentence by
describing what these
people **can** and **cannot**
do.

*Practice
makes
Perfect*

Modal Verbs

	work in teams	speak English	use Excel	install Office	solve math exercises
CHEPE					
JUANA					
LUPERTO					
ROXANA					

PREPOSITION + ING

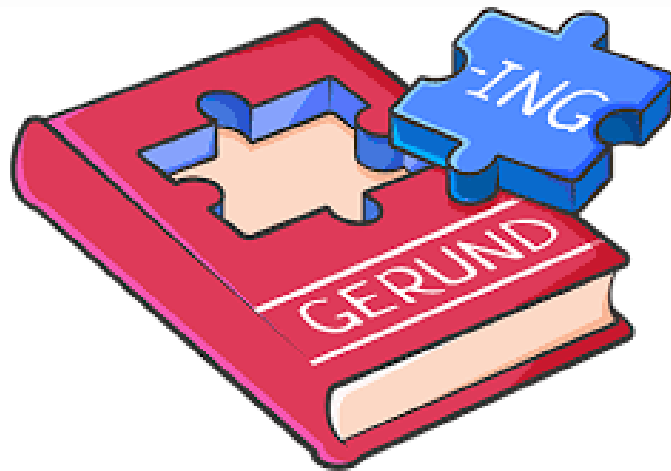

When a **PREPOSITION** is followed by a **VERB FORM**, the verb takes the **-ING FORM** (**GERUND**).

STRUCTURE:

PREPOSITION + VERB-ING

Example: This app is useful for **organizing** schedules.

Examples:

- You can open the file **BY clicking** the icon.
- It's designed **FOR managing** complex projects.
- You can export files **WITHOUT losing** quality.
- Remember to save changes **BEFORE closing** the program.
- Restart the system **AFTER installing** the update.
- Use GitHub **INSTEAD OF** emailing files.
- We always talks **ABOUT integrating** an API for payment.
- Saúl is working **ON improving** the interface speed.

In English, we add -ing to verbs when we transform them into nouns (called gerunds).

We sometimes drop a letter, or double a letter when adding –ing. But, how?

GERUND

In this lesson, we'll learn the spelling rules for adding -ing to verbs.

***Check the EXTRA PDF material on the platform:
SPELLING-RULES-ING

EXERCISE 2: GAP-FILLING

DIRECTIONS:

Complete the following sentence with the correct form of the verb between parentheses.

Practice
makes
Perfect

- You can improve performance **by** _____ (optimize) the code.
- Luis finished the task **without** _____ (ask) for help.
- Engineers prevent errors **by** _____ (write) unit tests.
- **Before** _____ (install) the new software, make a backup.
- Karla good at _____ (explain) technical topics clearly.
- I am interested **in** _____ (develop) new web features.
- The system crashed **after** _____ (change) the database configuration.
- You can't run the program **without** _____ (update) the drivers.
- Carlos can improve the user experience **with** _____ (add) a search function.
- Some students are worried **about** _____ (lose) important files.

STRUCTURE

+ **used to** + **base form** + 
verb

positive

I **used to** be responsible.

negative

I didn't **use to** be responsible.

question

Did you **use to** be responsible?

used to

use to

use to

ATTENTION
PLEASE

💡 USE:

We use **used to + base verb** to talk about **past habits** or **states** that are no longer true.

🧠 STRUCTURE:

SUBJECT + USED TO + BASE VERB

Example: This software **used to require** a paid license.

📄 EXAMPLES:

- Skype **used to be** very popular before Zoom.
- We **used to install** software from CDs.
- This app **used to crash** a lot, but it's stable now.
- I **used to have** classes on Sunday mornings.

- ❑ We **used to test** code manually.
- ❑ The app **used to include** a chat function.
- ❑ It **used to support** only 5 users at a time.
- ❑ Software engineers **used to install** using DVDs.
- ❑ This service **used to run** only on iOS.
- ❑ I **used to prefer** the old version.
- ❑ Developers **used to write** HTML in Notepad.

More examples:

EXERCISE 3: TRANSFORMATION DRILL

DIRECTIONS:
Rewrite the following
sentence by using
the modal
verb
USED TO.

PRACTICE

☐ Before, the software was free.

→ It _____.

☐ We worked on desktop computers only.

→ We _____.

☐ The team met in person every day.

→ The team

_____.

☐ People didn't use smartphones for emails.

→ People _____.

☐ They had to install every update manually.

→ They _____.

☐ The company didn't have remote workers.

→ The company _____.

☐ She designed websites with Flash.

→ She _____.

☐ I saved my files on CDs.

→ I _____.

READING TIME

**DESCRIBING
FUNCTIONS AND
FEATURES OF
INPUT AND
OUTPUT DEVICES**

In the world of computing, **input and output devices** play a crucial role in how humans communicate with machines. Whether you're writing code, browsing the internet, or designing an app, you are constantly using devices that allow you to **send data to the computer (input)** and **receive feedback or results (output)**.

Understanding the **functions and features** of these devices is important for software engineers because it helps you build more **user-friendly systems**, troubleshoot hardware problems, and design software that works smoothly with a variety of devices.

◆ Input Devices

Input devices are used to enter data into a computer. The most common input device is the **keyboard**, which can be used for **typing commands, writing code, and entering passwords**. Another common input device is the **mouse**, which helps users **navigate** on the screen by **clicking and dragging**.

More advanced input devices include **scanners, touchscreens, and microphones**. A scanner can **capture images and text** from a physical page and convert them into digital files. A touchscreen lets the user interact **by tapping or swiping** directly on the screen. Microphones are used to **record sound or give voice commands**.

In the past, people **used to rely** on devices like **joysticks and trackballs**, but today, these are less common.

◆ Output Devices

Output devices display or produce results from the computer. The **monitor** is the most widely used output device. It can show text, graphics, videos, and user interfaces. Monitors today offer high-resolution displays that **make it easier to read** and **work on detailed designs**. **Printers** are also output devices. They allow users to **create physical copies** of digital documents or images. Some modern printers include scanning and fax functions, which **make them multifunctional**.

Another example is **speakers**, which output sound. They are used for **playing music, videos, or notifications**. Headphones work in a similar way, but they offer **more privacy**.

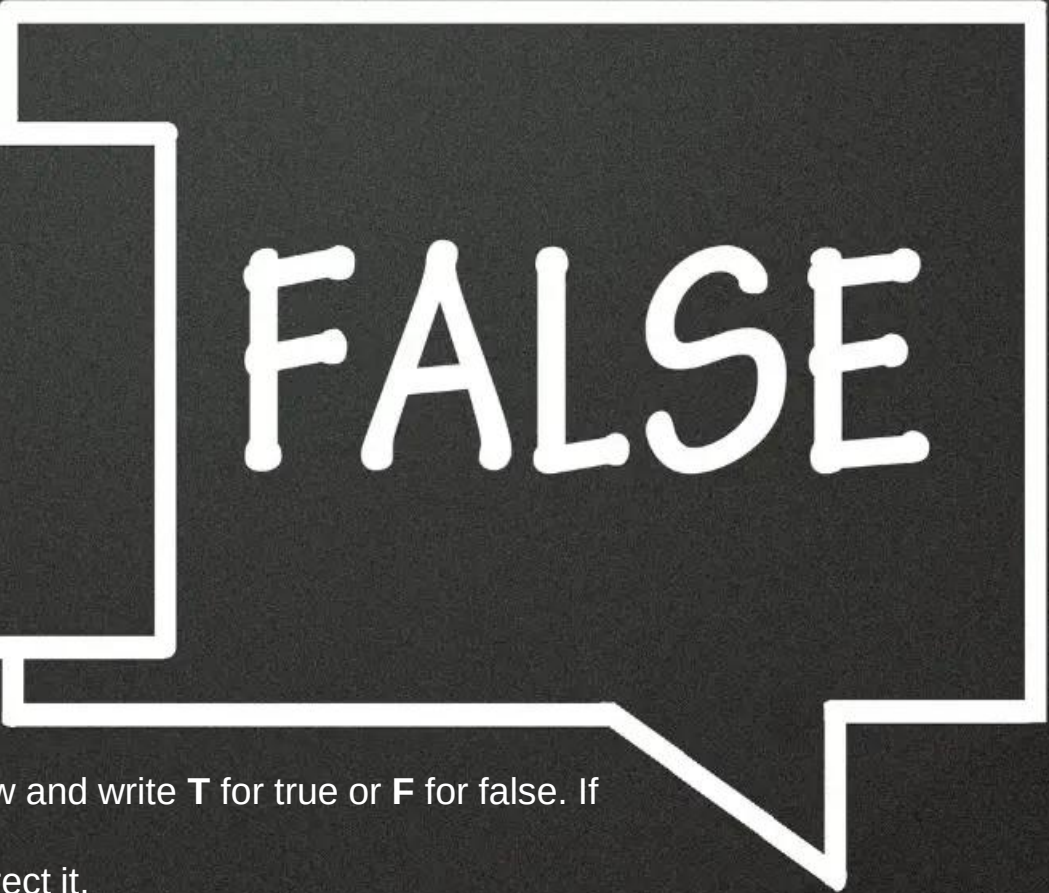

Input and output devices are essential parts of any computer system. They allow users to **communicate with software** and perform a wide range of tasks, from **entering data** to **receiving results in visual, printed, or audio form**. As technology continues to evolve, these devices become more efficient, multifunctional, and user-friendly.

WORKSHEET ON

TRUE

FALSE

Read the statements below and write **T** for true or **F** for false. If the statement is false, correct it.

- Input devices allow users to receive data from the computer.
- A keyboard is an example of an input device.
- A scanner can convert digital text into handwritten notes.
- People used to rely more on trackballs and joysticks in the past.
- Monitors and printers are examples of input devices.
- A touchscreen lets the user interact by tapping or swiping.
- Speakers are output devices that produce sound.
- Output devices are used to enter information into the system.
- Printers can only print documents and have no other functions.
- Understanding input and output devices helps software engineers create better systems.

WORKSHEET

VOCABULARY MATCHING EXERCISE

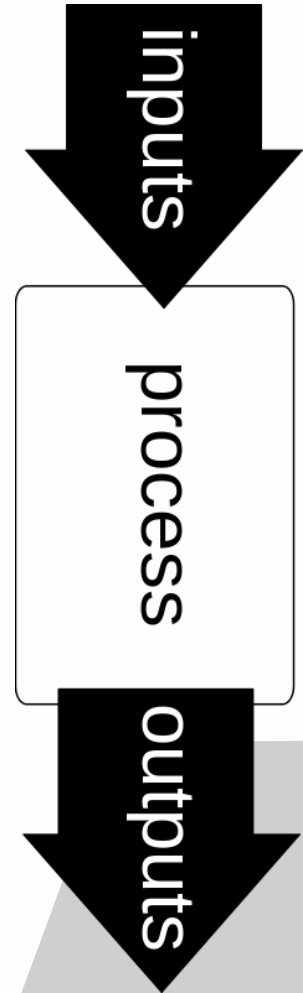

DIRECTIONS:

Match each
DEVICE with its
correct
FUNCTION.

keyboard
mouse
monitor
printer
scanner
microphone
speakers
touchscreen
webcam
projector
external hard drive
USB flash drive
joystick
graphics tablet
headphones

- A.** Outputs sound privately to the user
- B.** Converts printed images or text into digital format
- C.** Displays the computer's user interface and graphics
- D.** Allows users to input text and commands
- E.** Used to control screen elements by clicking or dragging
- F.** Records voice or sound as digital input
- G.** Transfers and stores files in a portable form
- H.** Displays large images or presentations on a wall or screen
- I.** Captures live video or images for calls or recording
- J.** Allows drawing or design input using a stylus
- K.** Stores large amounts of data externally
- L.** Lets users play audio from the computer
- M.** Provides direct interaction through tapping or swiping
- N.** Used for controlling movement in games or simulations
- O.** Produces physical copies of digital files
